

Credentials as a Service

Printing, chip encoding and dispatching of cards, for large quantities or individual card personalisation within a service contract

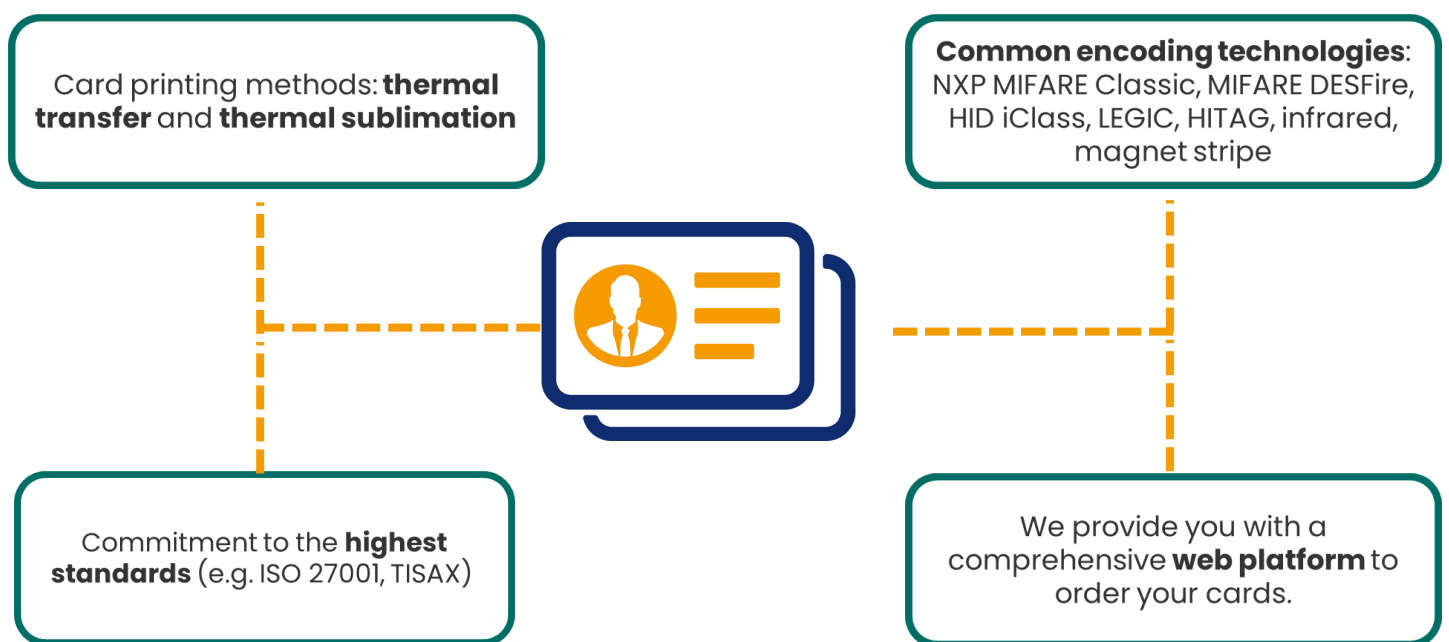

With Credentials as a Service, ID-ware takes care of the printing, chip encoding and dispatching of credentials (globally through certified parcel services), either centrally to your organisation or to the cardholder's personal address.

You have to produce employee or student cards that comply with all required security standards; however, you do not have the resources, expertise or relevant hardware for that?

Just outsource the whole process of card personalisation, encoding, printing and distribution to us!

Due to our commitment to the highest standards (e.g. ISO 27001, TISAX), we continuously grant the highest security and data protection level for card personalisation.

Rely on our extensive experience, as this whole process is our core business!

As we have high personalisation capacities, this does not only improve printing quality but also lowers the total cost per card.

Enterprise business customers, government authorities and educational organisations (universities, high schools, etc.), rely on our high-quality services around credential personalisation.

Key Benefits

Security

Automated processes as well as expert team

Scalability

Easily scalable service

No Investment

No in-house investment or expertise/training required for card encoding and personalisation

No Hardware

No investment required for printers and related hardware

No resources

No resources needed for card distribution

High Quality

Increased printing quality

CipherToken: Highly secure credential design to comply with specific requirements in the UK

To comply with specific requirements in the UK, i.e. the NPSA (National Protective Security Authority) Token & Reader Secure Design Guidance, the ID-ware secure credential design "CipherToken" delivers a robust token architecture with advanced cryptographic encryption.

The CipherToken credential is a vendor-independent solution and can be used with any DESFire reader. As an option, full card personalisation can also be managed on site.

About us

ID-ware is a leading global provider of Physical Identity and Access Management (PIAM) solutions. With over 20 years of experience, we are specialised experts for effective identification and authentication processes to support large-scale organisations.

Our innovative and secure products in connection with our strong principle of long-term partnerships make our customers profit from customised solutions for their complex environments.
